BABS DIGITAL INNOVATIONS & LEARNING PLATFORM (BDIP)

Health Tourism

Connect health-related services, travel information, and responsible coordination.

Purpose

Within BDIP, Health Tourism is a specialized application area that can connect reliable health information, destination resources, service directories, travel planning, and administrative coordination. The platform can organize information and support navigation, while clinical decisions remain with qualified healthcare professionals and service providers.

Core capabilities

- Structured directories of facilities, services, and destination resources
- Clear information about available services and processes
- Travel, accommodation, accessibility, and logistical information
- Multilingual communication and information navigation
- Service comparison using transparent, verifiable criteria
- Privacy-aware coordination and feedback mechanisms

Operating workflow

Identify information needs → present verified resources → clarify service and travel requirements → support coordination → review feedback and update information.

Expected contribution

More navigable information, better coordination, improved transparency, and a clearer digital journey for users and participating organizations.

Connections within BDIP

Knowledge management; AI-assisted information access; Data analytics; Digital applications; Governance, privacy, accessibility, and quality assurance.

This is a proposed digital-support framework, not medical advice, a clinical referral, or a guarantee of provider quality.
