BABS DIGITAL INNOVATIONS & LEARNING PLATFORM (BDIP)

One Health

Support collaboration across human, animal, and environmental health.

Purpose

One Health is an interdisciplinary application area aligned with BDIP's multidisciplinary design. It can bring together information and expertise relevant to human health, animal health, food systems, and the environment, helping teams organize evidence and explore shared risks across disciplines and institutions.

Core capabilities

- Interdisciplinary research spaces and shared terminology
- Organization of human, veterinary, agricultural, and environmental data
- Monitoring indicators and trend visualization
- Literature discovery and evidence synthesis
- Statistical analysis, modelling, and scenario exploration
- Knowledge sharing among researchers and relevant organizations

Operating workflow

Define a shared problem → identify relevant disciplines and data → assess data quality → analyse patterns jointly → communicate evidence → coordinate appropriate action.

Expected contribution

Better cross-disciplinary visibility, stronger evidence exchange, more integrated analysis, and support for coordinated research and prevention planning.

Connections within BDIP

Research; Data Science; Knowledge management; AI-assisted discovery; Applications; Data governance and ethical oversight.

The platform supports information and research workflows; it does not replace public-health, veterinary, environmental, or clinical authorities.
