BABS DIGITAL INNOVATIONS & LEARNING PLATFORM (BDIP)

Learning & Skills Development

Build knowledge, practical capability, and lifelong learning.

Purpose

The BDIP Learning domain provides a flexible environment for acquiring knowledge and developing skills across academic, scientific, professional, and community settings. It connects learning resources with guided activities, practical exercises, research methods, and continuous professional development.

Core capabilities

- Digital courses, tutorials, and reusable educational resources
- Structured learning pathways and competency development
- Professional training and continuing education
- Interactive exercises, practical projects, and skills assessment
- AI-assisted explanations, recommendations, and personalized learning
- Learning analytics to review participation and progress

Operating workflow

Identify learning needs → select resources → practise and assess → apply skills → reflect and continue learning.

Expected contribution

Accessible learning opportunities, stronger practical skills, informed learners, and a continuous feedback loop between education, research, and innovation.

Connections within BDIP

Knowledge resources; Data Science and learning analytics; AI-assisted learning; Research methods; Educational and professional applications.
