BABS DIGITAL INNOVATIONS & LEARNING PLATFORM (BDIP)

Knowledge Management & Discovery

Organize trusted resources so knowledge can be found and reused.

Purpose

The BDIP Knowledge domain organizes scientific publications, reports, educational materials, technical documentation, institutional expertise, and research findings. It helps users move from scattered information to structured, searchable, connected knowledge that supports learning, research, and practical work.

Core capabilities

- Digital libraries and curated reference collections
- Structured knowledge bases and topic catalogues
- Metadata, source attribution, and document organization
- Search, semantic discovery, and cross-topic connections
- Reusable learning resources and technical documentation
- Knowledge sharing across people and institutions

Operating workflow

Collect resources → describe and organize them → check sources → index and connect topics → retrieve and reuse knowledge → update the collection.

Expected contribution

Improved discoverability, reduced duplication, traceable sources, knowledge continuity, and stronger links between learning and research.

Connections within BDIP

Learning resources; Research publications; Data and metadata; AI-assisted search; Applications; Governance and provenance.
