BABS DIGITAL INNOVATIONS & LEARNING PLATFORM (BDIP)

Governance & Sustainability

Make digital development trustworthy, secure, inclusive, and maintainable.

Purpose

The BDIP Governance domain provides principles and practices for operating a responsible digital ecosystem. It addresses access, privacy, security, data quality, provenance, ethical research, responsible AI, accessibility, accountability, and efficient use of resources throughout the platform lifecycle.

Core capabilities

- Identity, permissions, and role-based access
- Privacy, security, and responsible data handling
- Data provenance, documentation, and quality controls
- Responsible-AI review and human oversight
- Ethical research, compliance, and audit trails
- Accessibility, inclusion, monitoring, and resource efficiency

Operating workflow

Set requirements → assign responsibilities → implement controls → monitor performance and risks → audit and improve → document decisions.

Expected contribution

Greater trust, clearer accountability, safer information handling, more inclusive access, and a platform that can be maintained as needs evolve.

Connections within BDIP

All domains, especially data infrastructure, AI services, research integrity, applications, privacy, and sustainability.
